CALIFORNIA DIVISION OF MINES AND GEOLOGY

Supplement <sup>#1</sup> to FER-6

August 2, 1977

According to Ray Coudray, geologist for Santa Barbara County, a suspected trace of the Mesa fault was trenched recently and <sup>the fault</sup> could not be verified (telephone call of 8/2/77). The precise location of the trench is not known at this time, but a report no doubt exists in the files of Santa Barbara City or County. Coudray indicated the trench, which was 600 feet long by 14 feet deep, was in the La Cumbre area where distressed buildings had been reported previously.

Earl W. Hart
